

Nifty Fifty Settings & Rules

- We only enter trades on Thursdays at 3:30 PM ET
- All trades are based on hourly charts
- Bullish Signal – We look for the low of the current bar to be greater than the low of the previous bar, the high of the current bar to be less than the high of the previous bar and the current bar close to be greater than the close of the previous bar
- Bearish Signal – We look for the current bar's high to be greater than the previous bar's high, the current bar's low to be less than the previous bar's low, and DMI Minus to be greater than DMI Plus using a 14 bar setting

- After a trade is entered, we use a +50% target and a -50% stop
- We select the options of the same-week expiration, and we choose the option priced most closely to the hourly 20 Period Average True Range x 2.5
- Trades that have not hit their stop or target will be closed at 1:30 PM ET on Friday
