

## Triple A Options Settings and Rules

- We use a 14 bar DMIplus and DMIminus
- We use a 14 bar ADX
- We use a 20 bar Average True Range

### **Bullish Signal:**

- We look for ADX crossing above DMIminus, ADX greater than the previous bar, DMIminus less than the previous bar, and ADX of 5 bars ago to be less than 20

### **Bearish Signal:**

- We look for ADX to be greater than 50, DMI difference (Difference between Plus and Minus) to be greater than 20, DMIplus greater than DMIminus, ADX to have two consecutive lower closes

- **All trades will be day trades**
- Call trades are issued before 10:30 AM ET

- Put trades are issued between 10:45 AM ET - 1:00 PM ET
- Each trade uses a +200% target
- Call trades will be closed if the ADX has a lower close than the previous bar
- Put trades will be closed if ADX has a greater close than the previous bar
- If our target is not met and our ADX turn does not signal an exit, all open trades will be closed in the final hour of the trading day

We select the options priced most closely to the 15 minute 20 bar Average True Range

Signals Monday – Wednesday will trade same week options

Signals Thursday – Friday will trade following week expiration options
